

Let ϕ be the field

$$\phi(x, y, z, t) = p_x x + p_y y + p_z z - Et$$

where

$$E = \sqrt{p_x^2 c^2 + p_y^2 c^2 + p_z^2 c^2 + m^2 c^4}$$

The following solutions to the Dirac equation are used to model fermions.

$$\begin{aligned} \psi_1 &= \begin{pmatrix} E/c + mc \\ 0 \\ p_z \\ p_x + ip_y \end{pmatrix} \exp\left(\frac{i\phi}{\hbar}\right) & \psi_2 &= \begin{pmatrix} 0 \\ E/c + mc \\ p_x - ip_y \\ -p_z \end{pmatrix} \exp\left(\frac{i\phi}{\hbar}\right) \\ &\text{fermion spin up} & & \text{fermion spin down} \\ \psi_7 &= \begin{pmatrix} p_z \\ p_x + ip_y \\ E/c + mc \\ 0 \end{pmatrix} \exp\left(-\frac{i\phi}{\hbar}\right) & \psi_8 &= \begin{pmatrix} p_x - ip_y \\ -p_z \\ 0 \\ E/c + mc \end{pmatrix} \exp\left(-\frac{i\phi}{\hbar}\right) \\ &\text{anti-fermion spin up} & & \text{anti-fermion spin down} \end{aligned}$$

A spinor is the vector part of ψ . The following spinors are used for scattering calculations. Symbol u indicates a fermion and symbol v indicates an anti-fermion.

$$\begin{aligned} u_1 &= \begin{pmatrix} E/c + mc \\ 0 \\ p_z \\ p_x + ip_y \end{pmatrix} & u_2 &= \begin{pmatrix} 0 \\ E/c + mc \\ p_x - ip_y \\ -p_z \end{pmatrix} & v_1 &= \begin{pmatrix} p_z \\ p_x + ip_y \\ E/c + mc \\ 0 \end{pmatrix} & v_2 &= \begin{pmatrix} p_x - ip_y \\ -p_z \\ 0 \\ E/c + mc \end{pmatrix} \\ &\text{fermion spin up} & & \text{fermion spin down} & & \text{anti-fermion spin up} & & \text{anti-fermion spin down} \end{aligned}$$

This is the corresponding space-time momentum vector p .

$$p = \begin{pmatrix} E/c \\ p_x \\ p_y \\ p_z \end{pmatrix}$$

Spinors are solutions to the following momentum-space Dirac equations where $\not{p} = p^\mu g_{\mu\nu} \gamma^\nu$.

$$\not{p}u = mcu \quad \not{p}v = -mcv$$

Up and down spinors have the following “completeness property.”

$$u_1 \bar{u}_1 + u_2 \bar{u}_2 = (E/c + mc)(\not{p} + mc) \quad v_1 \bar{v}_1 + v_2 \bar{v}_2 = (E/c + mc)(\not{p} - mc)$$

The spinor adjoints are $\bar{u} = u^\dagger \gamma^0$ and $\bar{v} = v^\dagger \gamma^0$. The adjoint is a row vector hence $u\bar{u}$ and $v\bar{v}$ are outer products.
