## Spontaneous emission rate

Find the spontaneous emission rate for hydrogen state  $2p \rightarrow 1s$ .

The wave function for hydrogen is

$$\psi_{nlm}(r,\theta,\phi) = R_{nl}(r)Y_{lm}(\theta,\phi)$$

where

$$R_{nl}(r) = \frac{2}{n^2} \sqrt{\frac{(n-l-1)!}{(n+l)!}} \left(\frac{2r}{na_0}\right)^l L_{n-l-1}^{2l+1} \left(\frac{2r}{na_0}\right) \exp\left(-\frac{r}{na_0}\right) a_0^{-3/2}$$

$$L_n^m(x) = (n+m)! \sum_{k=0}^n \frac{(-x)^k}{(n-k)!(m+k)!k!}$$

$$Y_{lm}(\theta,\phi) = (-1)^m \sqrt{\frac{(2l+1)}{4\pi} \frac{(l-m)!}{(l+m)!}} P_l^m(\cos\theta) \exp(im\phi)$$

$$P_l^m(\cos\theta) = \begin{cases} \left(\frac{\sin\theta}{2}\right)^m \sum_{k=0}^{l-m} (-1)^k \frac{(l+m+k)!}{(l-m-k)!(m+k)!k!} \left(\frac{1-\cos\theta}{2}\right)^k, & m \ge 0 \\ (-1)^m \frac{(l+m)!}{(l-m)!} P_l^{|m|}(\cos\theta), & m < 0 \end{cases}$$

State 2p is shorthand for n=2 and l=1. For l=1 there are three ways to choose m hence all of the following processes correspond to the transition  $2p \to 1s$ . It turns out that all three processes have the same transition rate.

The spontaneous emission rate is

$$A_{21} = \frac{4\alpha\omega_{21}^3|r_{21}|^2}{3c^2} \tag{1}$$

where

$$\omega_{21} = \frac{E_2 - E_1}{\hbar}, \quad E_n = -\frac{\alpha \hbar c}{2n^2 a_0}$$
$$|r_{21}|^2 = |x_{21}|^2 + |y_{21}|^2 + |z_{21}|^2$$
$$x_{21} = \int_0^\infty \int_0^\pi \int_0^{2\pi} x f_{21} \, dV, \quad y_{21} = \int_0^\infty \int_0^\pi \int_0^{2\pi} y f_{21} \, dV, \quad z_{21} = \int_0^\infty \int_0^\pi \int_0^{2\pi} z f_{21} \, dV$$

and

$$f_{21} = \psi_{100}^* \psi_{210}$$

$$x = r \sin \theta \cos \phi, \quad y = r \sin \theta \sin \phi, \quad z = r \cos \theta$$

$$dV = r^2 \sin \theta \, dr \, d\theta \, d\phi$$

The integrals work out to be

$$x_{21} = 0$$
,  $y_{21} = 0$ ,  $z_{21} = \frac{2^7}{3^5} \sqrt{2}a_0$ 

hence

$$|r_{21}|^2 = |z_{21}|^2 = \frac{2^{15}}{3^{10}}a_0^2$$

We also obtain

$$\omega_{21} = \frac{3\alpha c}{8a_0}$$

By equation (1) the spontaneous emission rate is

$$A_{21} = \frac{2^8}{3^8} \frac{\alpha^4 c}{a_0} = 6.26 \times 10^8 \,\text{second}^{-1}$$

Noting that

$$a_0 = \frac{\hbar}{\alpha \mu c}$$

we can also write

$$A_{21} = \frac{2^8}{3^8} \frac{\alpha^5 \mu c^2}{\hbar} = 6.26 \times 10^8 \,\text{second}^{-1}$$
