The space shuttle accelerates from zero to 17,000 miles per hour in 8 minutes. A Corvette accelerates from zero to 60 miles per hour in 4.5 seconds. The following script compares the two.

```
"Average space shuttle acceleration"

vs = 17000 "mile" / "hr"

ts = 8 "min" / (60 "min" / "hr")

as = vs / ts

as

"Average Corvette acceleration"

vc = 60 "mile" / "hr"

tc = 4.5 "sec" / (3600 "sec" / "hr")

ac = vc / tc

ac

"Time for Corvette to reach orbital velocity"

vs / ac 60 "min" / "hr"
```

The result shows that the space shuttle accelerates more than twice as fast as a Corvette.
