Crossing symmetry

We have for Bhabha scattering

$$\langle|\mathcal{M}|^2\rangle = 2\alpha^2\left(\frac{s^2+u^2}{t^2}+\frac{2u^2}{st}+\frac{t^2+u^2}{s^2}\right)$$

and for Moller scattering

$$\langle|\mathcal{M}|^2\rangle = 2\alpha^2\left(\frac{s^2+u^2}{t^2}+\frac{2s^2}{tu}+\frac{s^2+t^2}{u^2}\right)$$

The densities have crossing symmetry $s \leftrightarrow u$.
